CANCER ROSE

Independent French Non-Profit Organization of healthcare professionals and patients, unsubsidized, with no links of interest, promoting fair and objective information for women, on the benefits and harms of mammography screening.

Cancer Rose - Press Release

October 1st, 2023

The French Association Cancer Rose proposes an interactive decision-support tool in three languages (French, English, German) on breast cancer screening to help each woman assess her own benefits/harms balance. This tool can easily be used alone or with the help of a practitioner during a medical consultation. <https://oad.cancer-rose.fr/>

The tool presents two versions for the balance of benefits and harms:

- A benefits/harms balance based on unfavorable hypotheses to screening.
- A benefits/harms balance based on favorable hypotheses to screening.

It is possible to enter the age for the start and the end of participation in screening to obtain a personalized estimate of expected benefits (avoided deaths) and harms (overdiagnosis and false alarms) associated with screening.
